

Report title

Maybe a longer but still short subtitle.

Johannes Franke

ABSTRACT

A short abstract of your report should briefly describe the topic you have chosen and the approaches that you will present.

KEYWORDS

Seminar IR, Winter term 2024/25

1 INTRODUCTION

Introduction to your report. Maybe you want to reference some publication [1], just give the authors of some publication: Croft et al., or give the authors and the reference Croft et al. [1]. Including graphics also is usually dead simple, like with Figure 1.

2 APPROACH 1

Describe some potential approach in this section.

Blindtext. This is some text without a meaning. It is just meant to fill some space. If you read this text, you will get no information. Really? Is there no information? Is there really no difference between this text and some nonsense like “cofeve”? Not at all! A blind text like this gives you information about the selected font, how the letters are written, and an impression of the look and feel. This text should contain all letters of the alphabet and it should be written in the original language. There is no need for special contents, but the length of words should match the language.

3 APPROACH 2

Describe some potential second approach in this section.

Blindtext. This is some text without a meaning. It is just meant to fill some space. If you read this text, you will get no information. Really? Is there no information? Is there really no difference between this text and some nonsense like “cofeve”? Not at all! A blind text like this gives you information about the selected font, how the letters are written, and an impression of the look and feel. This text should contain all letters of the alphabet and it should be written in the original language. There is no need for special contents, but the length of words should match the language.

4 APPROACH 3

Describe some potential third approach in this section.

Blindtext. This is some text without a meaning. It is just meant to fill some space. If you read this text, you will get no information. Really? Is there no information? Is there really no difference between this text and some nonsense like “cofeve”? Not at all! A blind text like this gives you information about the selected font, how the letters are written, and an impression of the look and feel. This text should contain all letters of the alphabet and it should be written in the original language. There is no need for special contents, but the length of words should match the language.

Table 1: Some example table.

	Some entries	Some numbers
Entry A	400 million	
Entry B	300 million	

5 EVALUATION

Some evaluation section if appropriate. Usually, you might want to reference some table with some results. For instance, Table 1 shows that Entry A yields the largest number.

Discussion. A good evaluation section includes some discussion of the (dis-)advantages of the different approaches. It is a good idea to also include some examples of inputs on which the different approaches work well / do not work well.

6 CONCLUSION

Add your conclusion here.

Blindtext. This is some text without a meaning. It is just meant to fill some space. If you read this text, you will get no information. Really? Is there no information? Is there really no difference between this text and some nonsense like “cofeve”? Not at all! A blind text like this gives you information about the selected font, how the letters are written, and an impression of the look-and-feel. This text should contain all letters of the alphabet and it should be written in the original language. There is no need for special contents, but the length of words should match the language.
